

VVS Kosice: VVS Kosice waterworks company switched to SAP

The customer

Východoslovenská vodárenská spoločnosť, a.s. (hereinafter VVS, a.s.), is operating in the area of drinking water supply for inhabitants and business entities in Eastern Slovakia. The competencies of the company include administration, operation, maintenance and repairs of the water supply network, water management and waste water control as well as protection of drinking water resources. 71% of inhabitants of the region are connected to the water supply network.

The challenge

The company decided to implement a new SAP-based information system to improve the management of financial accounting, controlling, logistics and human resources as well as management of long-term assets and the data warehouse. The information system is based on SAP R/3 Enterprise system and branch solution SAP IS-U/CCS, developed by SAP especially for the waterworks engineering industry. In the next stage as well branch modules were added to the system.

The project

S&T Slovakia (VARIAS) provided for the new information system own solutions for identification of material, property and documents with the use of bar codes and for management of company transport processes. This makes the work of employees easier and the processes more transparent, it reduces the time needed for execution of necessary activities as well as the error rate. The second solution allowed interconnection of management of company transport, passenger cars and construction mechanisms with other SAP modules. So, the management of basic company functions like finances, logistics and human resources management is supported.

The project also included a solution for administration and storage of documents. Thanks to this application, the waterworks company can now electronically manage the distribution of contracts, vendor and sales invoices, requirements of clients and internal documents like e.g. directives, instructions of the management or circulars.

Benefit to the customer

- cost reduction
- improved quality management
- simpler document administration

S&T Slovakia

S&T Slovakia was founded in 1993 and is today one of the most important suppliers of integrated solutions in the area of information technology in Slovakia. The company provides its customers with IT solutions including needs analysis, strategy development, delivery and implementation of technology, consulting services, training, service and project funding. In 2005, S&T took over Slovak SAP specialist company VARIAS, which focuses on system integration and implementation of SAP R/3 information systems and mySAP Business Suite solutions. S&T currently has around 150 employees in four cities in Slovakia: Bratislava, Zilina, Banská Bystrica and Kosice.

S&T Slovakia belongs to the S&T Group, which, with more than 3,100 employees in 22 countries and annual sales in 2007 of 522,2 million Euro, is the leading provider of IT consultancy, solutions and services for customers in Central and Eastern Europe, in the Germany-Austria-Switzerland (DACH) region and in China and Japan.
